## CAREER OBJECTIVE

Looking for a QA (Test) Engineer role with a successful company in which to use my skills and abilities to contribute to the growth of the company.

## SUMMARY

I am ISTQB certified tester. In total, I have four and a half years of commercial experience as a QA Engineer (both manual & automation). Successfully working in the field of law, I've always been curious about software testing and development. After graduating software testing course and reading many books on testing, Python, and JavaScript, I have discovered my passion for learning and improving my skills to test and develop high-quality software to be on the edge of new technologies and innovations.

Being a highly motivated person who has a creative approach to work, I know how to effectively and quickly learn and bring benefits to the team with which to work together. Among my main achievements, I consider the ability to analyze and prioritize various challenges. So, tasks that seem very difficult at once can be divided into entirely workable small segments and bring a real benefit to achieve an effective result of joint work on a project. QA Engineering makes me feel alive!

## RELEVANT SKILLS

- Familiar with testing websites, developing test documentation.
- Executing manual test cases, bugs reporting and verification, using tools like Jira, Zephyr, TestRail, TestLink.
- Writing, updating auto tests; Selenium, Jenkins.
- Essential knowledge of Python, JavaScript, TypeScript, C#, SQL.
- Sound understanding of Git and GitHub.
- Profound knowledge of IDEs, editors: VS Code, Sublime Text, PyCharm, Visual Studio
- Advanced English proficiency; Russian and Ukrainian – native speaking.
- Outstanding ability to work in a fast-paced, high-pressure environment with little oversight.
- Ability to convert high-level requirements into exceptional user experiences.
- Motivated to learn, grow and excel in web development.
- Eager to contribute to team success through hard work, attention to detail

## JOB DUTIES

QA Engineer Automation – Test Lead (4Team) - September 2021 – present

- Designing test plans, test cases; writing, executing auto tests. Bugs reporting and verification.
- Redesigning and refactoring testing framework
