PROFESSIONAL SUMMARY

Senior SDET / Test Automation Engineer with 8+ years in software quality and automation, complemented by recent hands-on work in AI/LLM evaluation and validation. Builds reliable UI/API and integration automation with Python, TypeScript/JavaScript, Playwright and Selenium. Independent AI work covers custom evaluation, deterministic output checks, model fallbacks and human oversight. Combines enterprise delivery in pharmaceuticals, payments, SaaS and threat intelligence with a PhD in Business Law and prior legal practice, supporting a structured approach to requirements, risk and evidence.

CORE SKILLS

AI Evaluation and Validation: Custom LLM evaluation · Schema and deterministic checks · Model fallbacks · Human-in-the-loop · OpenAI API · Claude / LiteLLM · Agent workflows · MCP tool calling

Automation and Code: Playwright · Selenium · Appium · pytest · Cypress · Python · TypeScript/JavaScript · C#

API and Data: REST · GraphQL · OpenAPI · Postman · SQL · PostgreSQL/MySQL · DBeaver

CI/CD and Diagnostics: Git · GitHub Actions · Azure DevOps · GitLab CI/CD · Jenkins · Docker · AWS / CloudWatch · Allure · Playwright Trace Viewer

Quality Engineering: Test architecture · Risk-based and exploratory testing · BDD · Distributed systems · System reliability · Data validation

INDEPENDENT AI ENGINEERING PROJECT

AI QA Factory / ARK | AI/LLM Evaluation and Automation May 2026 - Present

- Designed custom LLM evaluation and output-validation mechanisms using strict schemas, deterministic checks and stale-output detection, with model fallbacks for malformed model or tool output.
- Built Python workflows integrating the OpenAI API and Claude through LiteLLM, with model routing, persisted state, MCP tool calling and LangGraph-compatible workflow design.
- Implemented bounded agent orchestration, execution budgets and human-approval gates; added approval-gated Playwright selector repair with deterministic revalidation.

PROFESSIONAL EXPERIENCE

EPAM Systems | Senior Software Test Automation Engineer Nov 2024 - May 2026

Pharmaceutical and retail e-commerce enterprise platforms

- Built a Playwright/TypeScript framework covering approximately 80% of regression across distributed microservices.
- Used Git and parallel GitHub Actions pipelines with PR/merge quality gates across both projects, reducing feedback time by approximately 35%.
- Diagnosed UI, API, log and database failures using Playwright traces, AWS/CloudWatch and PostgreSQL/MySQL validation in DBeaver; identified the failing layer in defect reports.
- Applied GitHub Copilot including agent mode, Microsoft Copilot, EPAM AI tools and Playwright MCP to test design, code generation/refactoring, BDD/test data, browser exploration, locator validation and root-cause analysis, with mandatory human review; accelerated delivery by approximately 40%.

PROFESSIONAL EXPERIENCE CONTINUED

N-iX | Senior QA Automation Engineer Apr 2022 - Oct 2024

Threat intelligence SaaS platform

- Led a Selenium-to-Playwright/TypeScript migration prioritized by business risk, stability and execution value; built a scalable UI/API automation framework for CI-driven regression.
- Structured smoke, critical-path and scheduled regression suites; replaced fixed waits with state-based synchronization and improved test isolation.
- Reduced test flakiness from approximately 30% to below 5%, maintained a CI pass rate above 95%, and reduced manual regression effort by approximately 60%.
- Prototyped and evaluated Cypress/TypeScript for maintainability and CI fit during stack assessment.

4Team - SyncGene Project | QA Test Lead Oct 2021 - Apr 2022

Cross-platform synchronization product for web and desktop

- Led hands-on QA and test strategy across web and desktop, including compatibility coverage across supported platforms and versions.
- Contributed to C# automation and integration testing for synchronization workflows, with CI/CD execution through Azure DevOps Pipelines.

Dev.Pro | Automation QA Engineer Sep 2020 - Sep 2021

Financial services and payments platform

- Built a Selenium/Python/pytest framework for UI and integration regression; used Appium for mobile testing. Increased automation coverage by ~40% and reduced regression from three days to under one.

Freelance / Independent Projects | QA and Automation Engineer Jan 2018 - Sep 2020

- Delivered QA for SaaS platforms, including SQL-based data validation; developed Selenium/Python automation through hands-on project work.

LEGAL AND ACADEMIC BACKGROUND

Yaroslav Mudryi National Law University | Academic and Legal Research 2001 - 2020

Assistant Professor from 2005; later Associate Professor.

- Taught and researched commercial, business and corporate law. Published on corporate rights, technology transfer, EU-oriented corporate-law adaptation, and regulation of blockchain, cryptocurrencies and virtual assets.
- Contributed to the course International Aspects of Corporate Law and Governance with the University of Hertfordshire, UK (2008-2009).

Prior legal practice in Ukraine: Attorney / Advocate (2004-2018); Private Notary, Kharkiv City Notarial District (2005-2012; 2014-2020).

EDUCATION AND CERTIFICATIONS

PhD in Business Law, 2008 · Master's Degree in Legal Sciences, 2002

ISTQB Certified Tester - Foundation Level, 2021

EPAM AI-Assisted Development Training, 2024-2025

Software Testing Diploma - IT STEP Academy, 2018

LANGUAGES

English - C1 · Ukrainian and Russian - Native

Slovak - Strong comprehension; basic conversational speaking
