PROFESSIONAL SUMMARY

PhD-qualified legal professional and Senior SDET / Test Automation Engineer with prior attorney and notarial practice in Ukraine and 8+ years in software quality and automation. Combines commercial and corporate-law expertise with hands-on engineering in Python, TypeScript/JavaScript, Playwright, API testing, test architecture, CI/CD quality gates, data validation, and distributed-system diagnostics. Recent independent AI/LLM work includes custom evaluation, schema-based and deterministic validation, failure analysis, model fallbacks, agent workflows, MCP tool calling, and human-approval controls. Brings legal analysis, senior engineering discipline, and evidence-based validation to Legal AI, Legal Engineering, and AI assurance roles.

CORE EXPERTISE

AI Evaluation and Assurance: LLM Evaluation | Evaluation Criteria | Output Validation | Deterministic Checks | Model Fallbacks | Human-in-the-Loop | OpenAI API | Claude / LiteLLM | Agent Workflows | MCP

Engineering and Automation: TypeScript / JavaScript | Python | Playwright | Selenium / pytest | Test Architecture | Risk-Based Testing | CI/CD Quality Gates | Distributed Systems | Data Validation

Legal and Governance: Commercial and Corporate Law | Corporate Rights | Legal Research | Technology Regulation | GDPR Principles | AI Governance Controls

API, Data and Cloud: REST / GraphQL | OpenAPI | SQL | PostgreSQL / MySQL | GitHub Actions | Azure DevOps | GitLab CI/CD | Jenkins | Docker | AWS / CloudWatch

SELECTED AI ENGINEERING PROJECT

AI QA Factory / ARK | Independent AI/LLM Engineering Project

May 2026 - Present

- Built a Python AI automation platform integrating OpenAI and Claude through LiteLLM, with model routing, fallbacks, and MCP tool calling.
- Designed custom LLM evaluation and output-validation mechanisms using strict schemas, deterministic checks, and stale-output detection.
- Implemented bounded agent workflows with persisted state, execution budgets, and human-approval gates to control AI-assisted execution.
- Developed approval-gated Playwright selector repair with deterministic revalidation of AI-generated changes.

EU AI Act relevance: Implemented human-oversight and validation controls that can support subsequent readiness assessments.

PROFESSIONAL EXPERIENCE

EPAM Systems | Senior Software Test Automation Engineer

Nov 2024 - May 2026

Pharmaceutical and retail e-commerce enterprise platforms

- Built a Playwright/TypeScript framework covering approximately **80% of regression** across distributed microservices.
- Reduced feedback time by approximately **35%** through parallel GitHub Actions pipelines and PR/merge quality gates; diagnosed failures across UI, APIs, AWS/CloudWatch, and PostgreSQL/MySQL.
- Applied GitHub Copilot (agent mode), Microsoft Copilot, EPAM AI tools, and Playwright MCP to test design, code generation/refactoring, browser exploration, and failure analysis, with human review.

PROFESSIONAL EXPERIENCE CONTINUED

N-iX | Senior QA Automation Engineer

Apr 2022 - Oct 2024

Threat intelligence SaaS platform

- Led a risk-based Selenium-to-Playwright/TypeScript migration and built a scalable UI/API automation framework for CI-driven regression.
- Reduced flakiness from approximately **30% to below 5%** through state-based synchronization and structured smoke, critical-path, and scheduled suites.
- Maintained CI pass rate above **95%** and reduced manual regression effort by approximately **60%**; evaluated Cypress/TypeScript for maintainability and CI fit.

4Team - SyncGene Project | QA Test Lead

Oct 2021 - Apr 2022

- Led hands-on QA/test strategy across web and desktop; contributed to C# automation and Azure DevOps CI/CD integration testing.

Dev.Pro | Automation QA Engineer

Sep 2020 - Sep 2021

- Built Selenium/Python/pytest UI and integration automation for financial services/payments; increased coverage by approximately **40%** and reduced regression from approximately **three days to under one day**.

Freelance / Independent Projects | QA and Automation Engineer

Jan 2018 - Sep 2020

- Delivered QA for SaaS products, SQL-based data validation, and early Selenium/Python automation work.

LEGAL PRACTICE AND ACADEMIC EXPERIENCE

Private Notary, Ukraine | Kharkiv City Notarial District

2005 - 2012; 2014 - 2020

- Handled civil and business transactions, legal instruments, and document certification.

Yaroslav Mudryi National Law University | Academic and Legal Research

2001 - 2020

Assistant Professor from 2005; later Associate Professor.

- Contributed to developing the course *International Aspects of Corporate Law and Governance* in collaboration with the University of Hertfordshire, UK (2008-2009).
- Taught and researched commercial/economic, business and corporate law, corporate rights, and business regulation.
- Published research on corporate rights, EU-oriented corporate-law adaptation, technology transfer, and regulation of cryptocurrencies, blockchain, and virtual assets.

Independent Legal Practice | Attorney / Advocate, Ukraine

2004 - 2018

- Provided legal advice on commercial/corporate matters and business disputes as a licensed attorney in Ukraine.

EDUCATION AND CERTIFICATIONS

PhD in Business Law

Master's Degree in Legal Sciences, 2002 | Associate Professor (Docent) in Commercial/Economic Law, 2013

Harvey Academy - Legal Engineering Certification | September 2026

EPAM AI-Assisted Development Training, 2024-2025 | ISTQB CTFL, 2021

Software Testing Diploma, IT STEP Academy, 2018 | TESOL Certificate (120 hours), Global TESOL College, 2017

SELECTED RESEARCH

State Corporate Rights (monograph, 2009); technology-transfer regulation (2013); EU-oriented corporate-law adaptation (2016); legal status of cryptocurrencies (2018); blockchain and virtual-assets regulation (2020).
